

序号 Item	材料名称 Material Name	功能 function
1	PCBA	Process blood glucose signals, run algorithms, display results, and store data.
2	Assy, Housing, Back,	Closes with the front shell to form a complete outer shell, securing the battery
3	Slider, Connector	Used to connect blood glucose test strips to PCBA (circuit boards), ensuring stable contact and transmission of electrical signals when the test strips are inserted
4	Strip, Zebra	Transmits button press signals to PCBA (replaces metal contacts, prevents oxidation)
5	Housing, Front	Secure screen/buttons, protect internal components, and provide test strip insertion port
6	Door, Battery	Easy battery replacement
7	Lens	Translucent and scratch-resistant, covers the LCD screen
8	Button	Trigger power on/off, view historical data, and other functions.
9	Glass, LCD	Displays blood glucose values, time, battery power, and other data.
10	Screw, TORX, PH	Lock the front and rear shells to ensure that the entire machine is stable.
11	Screw, TORX, CH	Lock the front and rear shells to ensure that the entire machine is stable.
